Remove the adenoids with Radio-Frequency smooth cut and coagulation for the least traumatic surgical procedures.

The removal of adenoids is generally a time consuming process due to the amount of bleeding after the excision. In response to these problems, these electrosurgical adenoid currettes are designed to be used in a fashion similar to that of the Barnhill adenoid curette. In the process of mechanical cutting, the electrosurgical current will seal capillaries and, by doing so, reduce blood loss and prevent the reabsorption of infectious substances. After the excision is made, bleeding may be treated with the edge of the blade of the curette or with a ball electrode.

With the utilization of the correct technique, the use of the “pure” electrosurgical cutting current and a slower, more deliberate motion (rather than a quick, forceful stroke), the ELECTROSURGICAL ADENOID CURETTE will provide hemostasis to the tissue bed.

Ergonomically
Enhanced Designs for
handles and tips!

- Four sizes
- Straight tip
- Angled tip
- Smoke evacuation

Otolaryngology

RF-Electrosurgical Adenoid Currettes

Features and Benefits:

- Simultaneous cutting and coagulation
- Enhanced efficiency due to the control of bleeding, reducing operating room time
- Destruction of bacterial with the radio frequency electrosurgical currents, resulting in better first intention healing
- Compatible with standard operating room electrosurgical systems, completely insulated with RF-conenctor
- Available with and without suction capability
- Both standard Barnhill curette models and reverse angle Barnhill models are available
- Autoclavable by both conventional steam or gas methods

BLADE WIDTHS OF THE ELECTROSURGICAL ADENOID CURETTES:

Size 1

Size 2

Size 3

Size 4

Item Number	Description
72-5591	Electrosurgical Adenoid Curette, Size 1, straight
72-5592	Electrosurgical Adenoid Curette, Size 2, straight
72-5593	Electrosurgical Adenoid Curette, Size 3, straight
72-5594	Electrosurgical Adenoid Curette, Size 4, straight
72-5595	Electrosurgical Adenoid Curette, Size 1 with suction, straight
72-5596	Electrosurgical Adenoid Curette, Size 2 with suction, straight
72-5597	Electrosurgical Adenoid Curette, Size 3 with suction, straight
72-5598	Electrosurgical Adenoid Curette, Size 4 with suction, straight
72-5891	Electrosurgical Adenoid Curette, Size 1, reverse angle
72-5892	Electrosurgical Adenoid Curette, Size 2, reverse angle
72-5893	Electrosurgical Adenoid Curette, Size 3, reverse angle
72-5894	Electrosurgical Adenoid Curette, Size 4, reverse angle
72-5895	Electrosurgical Adenoid Curette, Size 1 with suction, reverse angle
72-5896	Electrosurgical Adenoid Curette, Size 2 with suction, reverse angle
72-5897	Electrosurgical Adenoid Curette, Size 3 with suction, reverse angle
72-5898	Electrosurgical Adenoid Curette, Size 4 with suction, reverse angle

Recommended RF-Connection Cables:

Item Number: 72-5009: RF-Connection Cable for Valleylab, Aspen, Bard, Bovie and other electrosurgical systems with the large "bovie" plug.

Item Number: 72-5021: RF-Connection Cable for electrosurgical systems.
